

Model VN-1

For Change and Tokens

Moderate price, good capacity and rugged components for reliable service are strong selling points for Hamilton's VN-1 changer. Housed in a medium weight vending style cabinet, the VN-1 is light enough for wall mounting. It can also be banked with other vending machines by using the optional header and base kit.

As a token vendor, the VN-1 is ideal for game rooms and family fun centers. All VN-1's are capable of accepting Hamilton's exclusive "Tokenote" paper tokens, adding even more value and versatility.

By adding the optional Hamilton AuditPro hand held programmer, you can program your own payout structure at any time... essential for running game room specials.

If you need greater capacity or versatility than a single hopper machine can provide, we recommend the V-2 or SV-2. If a high security cabinet is desired, we recommend the H-1 for single hopper needs, or the HS Series, which can be configured for up to three hoppers.

Dimensions:
36-3/8"H X 10"W X 13-1/4"D
Weight:
115 lbs.
