

# HAMILTON 3600r

Hamilton's 3600 Series Rear Load Changer offers customers more versatility than ever before. The basic unit includes dual STA Validators, three Hoppers and a rugged 3/16" thick carbon steel cabinet with stainless steel faceplate.

The 3600 Series can also be ordered with one or two Hoppers, a single Validator, and a coin acceptor.

The choice of options gives you the versatility you need. Your choice of Hoppers can be configured to dispense any combination of change, including golden dollar coins or tokens. An array of Validator models, such as the Hamilton STA or XE, Coinco, or Mars are available for the option of single or dual Validators. Hamilton also offers a choice of either a Slugbuster or IDX coin acceptor. Also available is the Audit Pro 2000 and thermal printer for a more convenient way to control payout combinations, auditing capabilities and complete transaction reporting.

At Hamilton it's all about choice. We offer our customers one of the most versatile change machine systems around. That translates into more options, more long-term savings, and greater ease of operation.
