

Hamilton HS Series

Two or Three Hopper Change or Token

The "HS" series from Hamilton is the largest change / token dispenser in the Hamilton product line. Constructed with a wrap-around, anti-pry door, it is made of 7 gauge carbon steel with a baked enamel finish. The door is secured with two Medeco stainless steel lock inserts for enhanced security. This series of changers can be configured with either two (Model HS-2) or three (Model HS-3) hoppers. An optional all-coin coin acceptor is also available to make this unit even more versatile (HSC-2 or HSC-3). Capacities for each hopper (2 or 3 hopper versions are available) are 4800 quarter size coins/tokens per hopper, 5500 nickel size coins/tokens or 9200 dime size coins/tokens. Tokens up to 1-1/8th inch in diameter may be dispensed.

When complete control of payout is desired, such as when dispensing coins of different denominations or configuring as a token dispenser, the Hamilton Audit Pro 2000 is recommended as an option. This hand held unit permits complete control of payout combinations as well as providing for detailed audit reports. A portable printer is also available to use in conjunction with the Audit Pro for providing hard copy reports.

For FEC and other amusement industry applications, "Token" face panels and red cabinets are available at no extra cost. All HS units are configured to accept Hamilton's exclusive "Tokenote" paper tokens.

In addition to all the features listed above, the HS series of token dispensers also accept Hamilton's exclusive Tokenote® Paper Tokens.
