

>**branch cap·ture**< capture of item images and MICR information at remote banking locations for the purpose of electronic transmission to the main bank or the data center. Eliminates the need for high volume check transports and cuts down on courier service fees.

>MirrorImage **ex·press**< was designed to address the need for item capture and image POD at the branch level. Utilizing a small check scanner like the Canon CR-180 or Panini MyVisionX the **ex·press** module transforms your current paper based proof operation to a Check21 ready, image-based proof workflow. The **ex·press** module enables you to capture, correct and research items where they are deposited - at the branch. Batches are either captured real-time to a central database or batch uploaded at the end of the day.

ex·press gives you the functionality of three modules in one: MI capture, MI repair and MI research.

ex·press takes advantage of cutting-edge technology like CAR/LAR to automate the balancing process and limit the need for manual data entry.

ex·press includes advanced features, such as intelligent balancing and account validation.

ex·press is capable of generating substitute checks (IRD's) for exchange with non-image institutions.

ex·press creates a posting file for upload to your core accounting system and generates your image cash letter for transmission to the Federal Reserve.

MIRRORIMAGE SUITE OF MODULES:

Jaguar Software is committed to developing and delivering check-imaging systems for financial institutions and businesses of all sizes.

Our ability to provide the very best product is accomplished by listening, understanding, and designing solutions that fit the needs of our customers.

Cost-effective digital check imaging can revolutionize your financial institution or company by reducing overhead, improving customer satisfaction, and enhancing workforce productivity. The recent passing of the "Check Clearing for the 21st Century Act" (Check 21) allows companies and financial institutions to further leverage the advantages of image processing.

Our MirrorImage Check Imaging System is a sophisticated, modular and user-friendly software solution consisting of the following modules:

- Image Capture
- Image Repair/Read & Key
- Image POD
- Image Research
- Image Statements
- Check 21
- Image Archive/Distribution
- Document Imaging
- COLD
- Branch Capture
